Four Generations of Glass Makers

Glass making is an art as well as a business. And, because in the daily operation of glass making, it is so often necessary to draw upon the accumulation of past experience, experiments, knowledge and traditions, the history of a glass business is as important to the glass buyer's pocketbook as it is to the glass maker's vanity.

William Swindell who was the founder of the business, boasted a father who came to this country, from Ireland to make glass, and a mother who was the daughter of William Emmett, the first successful glass manufacturer east of the Alleghany Mountains.

William Swindell entered the Philadelphia manufactory of his father and grandfather early age. From early boyhood, when age of 14, his father's death left upon ders the care of his mother, four brothwo sisters, William Swindell learned g from the bottom up.

came to Baltimore, and after workeyman glass maker for five years. Spring Garden Bottle Works of superintendent as well as part he next twenty years he acthree other glass businesses, Crystal Window Glass Works ons were associated with f SWINDELL BROTHERS.

e successive generations on the business.

de only window glass ass that it was the into their specifiss" — a custom that was carried on for several years after the time when window glass was no longer manufactured at all in Baltimore!

In 1880 a bottle division of the business was started, and the window glass and bottle divisions were operated side by side until the window glass factory burned down in 1901 and was never rebuilt. By that time Swindell Bros. had achieved an outstanding reputation as fine bottle makers and their customer list gradually acquired the names of America's leading perfumers, cosmetic makers, chemists and distillers.

In 1927 automatic bottle blowing machinery was installed with consequent economies of mass production and widened markets. But Swindell still continues the manufacture of "hand-made" bottles — being one of the few firms remaining in the United States who make bottles by hand.

Just as the management and traditions of Swindell glass making have been passed on from father to son, so have the actual glass workers kept the secrets of their peculiar skill within the family. Many of the Swindell workers can boast a father and grandfather who, in their day, were on the Swindell payroll.

This vast treasure house of accumulated skill and knowledge is at your disposal in working out your bottle problems. Because Swindell Bros. make **both** machine and hand-made bottles they are in a position to advise you impartially which particular type is best suited to your particular business. You may feel free to call upon the Swindell fund of experience with full confidence that the organization is more eager to serve you than sell you—for the simple reason that more than a half century of business history has proved that it **pays to serve!**

DESIGN DIVISION

Machine-Made Stock and Private Mould Bottles

Long experience in manufacturing exclusive designs for discriminating buyers who would use only hand-made bottles of the finest character has given Swindell Bros. a background which has proven immensely valuable in the creation of basic ideas for stock machine-made bottles. These bottles—of which there is a broad selection—are designed with a beauty and symmetry that makes it possible for the user to develop a highly personalized container and at the same time avail himself of the economies of mass production.

It may rank as a **"Believe It or Not"** Item that some bottles are **more breakable** than others of the same shape and size. Nevertheless, this is a fact. The sturdiness and resistance to breakage, and strength, as well as the clearness of color and uniformity is a question of "even distribution" of the glass in the mould. In Swindell bottles this is carefully controlled, and scientific inspection and packing assure you bottles of prime and uniform quality.

PRIVATE MOULD

If you want your own design faithfully followed, or if you want an original design created from which exclusive moulds are maintained for your own use and no one else's—Swindell Bros. are equipped to give you comprehensive and intelligent service.

Such bottles offer the price advantages of mechanical production, but at the same time, so faithfully follow the traditions of fine hand-made glassware, that they are almost indistinguishable to the layman's eye.

A complete up-to-date mould and model is at your command, and we will submit s and models without charge or obligatio

Hand-Made Stock and Private Mould Bottles

When you are confronted with the necessity of choosing between a machine and a hand-made bottle, it is logical to consult Swindell Bros. who make both and who can sum up for you, impartially, the advantages of each process, and help you make a choice most suitable to your own particular problem.

There are only a few glass plants remaining in the United States where bottles are blown by hand—and Swindell Bros. is one of that select company. With a background of years of satisfactory experience in meeting the exacting demands of perfumers, Swindell Bros. may be relied upon to supply you bottles which will enhance the selling value of your product.

This is particularly true in the case of the finer grades of glass stopper bottles where a smooth and snug fit that prevents leakage can be secured only by a hand-made bottle with stoppers moulded and ground to fit each individual bottle.

It is an interesting commentary of the high development reached in the art of glass making centuries ago, that Swindell bottles are made practically the same as they have been made for hundreds of years. Highly skilled and deft workmen blow each bottle individually. They are polished and finished by hand; and, if they require a glass stopper, it is individually ground.

Over a long period of years Swindell Bros. have built up a matchless array of stock moulds for hand-made bottles which are illustrated on the pages which follow. In addition, creative and imaginative designers stand ready to originate a mould for your exclusive use, and submit a model without cost or obligation to you.
